
Technical specifications for 64UNO printing data

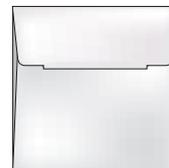

Closing system

The wallet is automatically closed by a transparent sticker.
So, the big flap comes above the small one.

For small orders under 250 pcs, the wallet is manually closed.
So, the small flap comes into the slot (see example opposite).

Automatically closing
by sticker

Manually closing for
order under 250 pcs

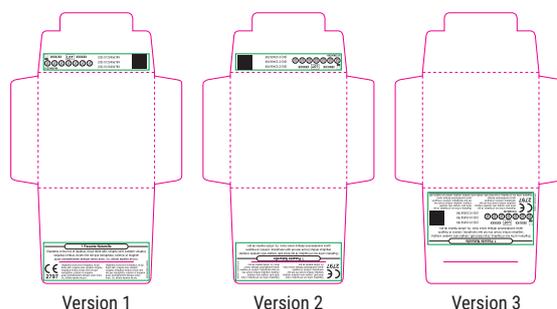

Template & legal text

There are three versions available for this template.

Only the placement of the legal text varies to allow
for optimal use of your design.

All legal text will be added on your artwork by ourselves.
The instructions of use are printed inside the wallet.

Templates for 2 and 3 languages are available on demand.

Dimensions & file to deliver

The folded format is 64 x 64 mm ; the flat format is 94 x 150 mm.

The printing file requires a 2 mm bleed on all edges, the final format is therefore 98 x 154 mm.

The file can be delivered in PDF, AI, PSD, JPG, PNG, INDD, etc. and must not contain any crop marks or the cutting lines, but must be in 1:1 scale (98 x 154 mm).

For crisp, high-quality prints, we recommend using high-resolution images (300 dpi).
Low resolutions may result in blurry or pixelated images.

Please convert all fonts to vector format
or provide the embedded fonts in your file.

We recommend using a CMYK color space.
Automatic conversions from RGB mode may alter the original colors.
Pantone colors are available upon request (to be quoted).
The maximum ink coverage should not exceed 330%.
It's also recommended to use pure black ink for text and QR codes at 100% coverage.
